PCC-EC10	**Microprocessor & Microcontroller**	**3L: 0T: 0P (03 hrs.)**	**Credits: 03**

Prerequisite: - Digital electronics, basics of computer architecture, buses & instructions cycle.

Course Objective: The objective of this course is that students can learn fundamental architectural & programming concepts of basic processors like 8085, 8086 and 8051 microcontroller, their interfacing with peripherals to design real life applications.

MODULE I   **(8 hrs.)**
Microprocessor & Microcontroller history, evolution, applications, 8 bit processor 8085 Architecture, Instruction set, Addressing modes, Interrupts, Timing Diagrams, Memory & I/O interfacing, Assembly Language Programming with 8085.

MODULE II   **(8 hrs.)**
Introduction to 16/32 bit microprocessors (8086, 8088, 68000 etc.), Architecture of 8086, instruction set, Minimum and Maximum mode configurations, Assembly Language Programming with 8086.

MODULE III   **(8 hrs.)**
Peripherals & Interfacing- RAM, ROM, Programmable Peripheral Interface (8255), Programmable Interval Timer (8253/54), Interrupt Controller (8259), DMA controller 8257, USART. Interfacing of 8/16 bit processor & designing of Applications using RS232, A/D, D/A converter, external memory, LCD, keyboard and stepper motor.

MODULE IV   **(8 hrs.)**
Overview of architecture of microcontroller 8051, SFRs, instruction set of 8051, timers and counters, Interrupts, Serial communication in 8051.

MODULE V   **(8 hrs.)**
Assembly language programming of 8051, 8051 Interfacing, Applications, ADC and DAC, Stepper motor interfacing, 8051 connections to RS-232, Study of Von Neumann v/s Harvard architecture, CISC and RISC instructions set architecture, serial peripheral buses (UART, I2C, SPI), Introduction to Real time systems.

Assessment: Internal viva, Continuous evolution of experiments, Journal write-up, Quiz and End semester exam.

Course Outcome: -
Students earning credits will develop ability to:

1. Understand architecture & programming of 8 bit microprocessors.
2. Understand architecture & programming of 16 bit microprocessors.
3. Design and analyze various peripheral interfacing required for microprocessor and microcontroller based circuits.
4. Understand architecture & programming of 8 bit microcontroller.
5. Design and analyze microprocessor based circuits.

Text/ Reference Book:

1. Rey Bhurchandi, "Advanced Microprocessor Architecture", 2nd edition, TMH, 2001.
2. Bray, "The Intel Microprocessors: Architecture, Programming and Interfacing", 2nd edition, PHI, 2003.
3. Soumitra Kumar Mandal, **"**Microprocessors And Microcontrollers Architecture, Programming & Interfacing Using 8085, 8086 And 8051", 1st edition, Mc Graw Hill India, 2011.
4. Muhammad Ali Mazidi, "The 8051 Microcontroller and Embedded Systems using Assembly and C", 2nd edition, Pearson, 2012.

PCC-EC10	Microprocessor & Microcontroller	0L: 0T: 2P (02 hrs.)	Credits: 01

List of Experiments:

1. Write a program to add/ subtract two 8 bit numbers in 8085 and check for carry/ burrow
2. Write a program using 8086 for division of a defined double word by another word and verify
3. To add two binary numbers each 8 byte long in 8086.
4. To find the maximum number in a given string (16 bytes long) and store it in location 0310 in 8086
5. To sort a string of 8 bit numbers in descending order in 8086
6. To multiply an ASCII string of eight numbers by a string ASCII digit. The result is a string of unpacked BCD digits.
7. Write an ALP in 8051 to add/subtract/multiply/divide two 8 bit no's available at register R0 & R1 of bank 0 and store the result in register R0/R1/R2/R3 of bank 1 and display the same on LED one by one.
8. Write an ALP in 8051 to transfer a block of data from one location (00H-07H) to another location (08H-0FH).
9. Write an ALP in 8051 to run timer 0, timer1 for 1 msec. & 5msec. to generate square wave on P 0.0 & P 0.1.
10. Write an ALP in 8051 to design pulse counter on 3.4 using counter 0 and give output on P2.
11. Write an ALP in 8051 to generate square wave on P1.2 using timer 0 interrupt and frequency can be controlled with input data on P2.
12. Write an ALP in 8051 to display IES IPS on 16*2 LCD.

Assessment: Internal viva, Continuous evolution of experiments, Journal write-up, Quiz and End semester exam.

Course Outcome: -
Students earning credits will develop ability to:

1. Understand architecture & programming of 8 bit microprocessors.
2. Understand architecture & programming of 16 bit microprocessors.
3. Design and analyze various peripheral interfacing required for microprocessor and microcontroller based circuits.
4. Understand architecture & programming of 8 bit microcontroller.
5. Design and analyze microprocessor based circuits.

IPS Academy, Institute of Engineering & Science
(A UGC Autonomous Institute, Affiliated to RGPV, Bhopal)
Scheme & Syllabus Based on AICTE Flexible Curricula **(B. Tech)**
Electronics & Communication Engineering Department

PCC-EC11	Digital Communication	3L: 0T: 0P (03 hrs.)	Credits: 03

Recommended Prerequisite: Engineering Mathematics, Electronics

Course Objective: To understand the key Modules of digital communication systems with emphasis on digital modulation techniques. To get introduced to the concept and basics of information theory and the basics of source and channel coding/decoding.

MODULE I (8 hrs.)
Cumulative distribution function, Probability density function, Mean, Variance and standard Deviations of random variable, Gaussian distribution, Error function, Correlation and Autocorrelation, Central-limit theorem, Error probability, Power Spectral density of digital data.

MODULE II (8 hrs.)
Sampling theorem, sampling of band pass signals, Pulse Amplitude Modulation (PAM), types of Sampling (natural, flat-top), equalization, signal reconstruction and reconstruction filters, aliasing and anti-aliasing filter, Pulse Width Modulation (PWM), Pulse Position Modulation (PPM).Quantization, quantization error, Pulse Code Modulation (PCM), commanding, scrambling, TDM-PCM, Differential PCM, Delta modulation, Adaptive Delta modulation, vocoders, bit rate & baud rate & bandwidth requirements, introduction to MIMO

MODULE III (8 hrs.)
Phase shift Keying (PSK)- Binary PSK, differential PSK, differentially encoded PSK, Quadrature PSK, M-arry PSK. Frequency Shift Keying (FSK)- Binary FSK (orthogonal and no orthogonal), M-arry FSK. Comparison of BPSK and BFSK, Quadrature Amplitude Shift Keying (QASK), Minimum Shift Keying (MSK), GMSK.

MODULE IV (8 hrs.)
Encoding techniques: On-Off, signaling, Polar signaling, RZ-NRZ signaling, Bipolar signaling, AMI, Manchester code, Differential encoding their advantage and disadvantages Pulse shaping to reduce inter channel and inter symbol interference, matched filter .

MODULE V (8 hrs.)
Introduction to information theory, uncertainty and information, average mutual Information and entropy, source coding theorem, Huffman coding, Shannon-Fano-Elias coding, Introduction, channel models, channel capacity, channel coding, Information Capacity theorem, Shannon limit.

Assessment: Internal Viva, continuous evaluation of experiments, journal write up, Quiz and End semester exam.

Course Outcomes:

Students earning credits will develop ability to:

1. To know the basics of random variable and distribution functions in digital Communications
2. To understand how the signal is converted from analog to digital signals

3. To learn the digital modulation techniques
4. To know how the signal is received and demodulation techniques
5. To understand the information theory used for channel coding

Text/ Reference Books:

1. Taub and Schilling, "Principles of Communication Systems", 2[ed] Edition, TMH, 2007.
2. Lathi, "Modern Digital and Analog Communication Systems", 4th Edition, Oxford University Press, 2010.
3. Simon Haykins, "Communication Systems", 5th Edition, John Wiley, 2009.
4. Ranjan Bose, "Information TheoryCoding and Cryptography", 2th Edition, TMH, 2008.
5. Skylar and Ray, "Digital Communications", 2th Edition, Pearson Education, 2001.
6. Rao, "Digital Communications", 2th Edition, TMH, 2017.

PCC- EC11(P)	Digital Communication	0L: 0T: 2P (02 hrs.)	Credits: 01

Assessment: Mid-term test, Assignment, Tutorial, Quiz and End semester exam.

List of Experiments:
1. Study of Sampling Process and Signal Reconstruction and Aliasing.
2. Study of PAM, PPM and PDM.
3. Study of PCM Transmitter and Receiver.
4. Time Division Multiplexing (TDM) and Demultiplexing.
5. Study of ASK, PSK and FSK Transmitter and Receiver.

Assessment: Internal Viva, continuous evaluation of experiments, journal write up, Quiz and End semester exam.

Course Outcomes:

Students earning credits will develop ability to:

1. To know the basics of random variable and distribution functions in digital Communications
2. To understand how the signal is converted from analog to digital signals
3. To learn the digital modulation techniques
4. To know how the signal is received and demodulation techniques
5. To understand the information theory used for channel coding

Text/ Reference Books:

1. Taub and Schilling, "Principles of Communication Systems", 2ed Edition, TMH, 2007.
2. Lathi, "Modern Digital and Analog Communication Systems", 4th Edition, Oxford University Press, 2010.
3. Simon Haykins, "Communication Systems", 5th Edition, John Wiley, 2009.
4. Ranjan Bose, "Information TheoryCoding and Cryptography", 2th Edition, TMH, 2008.
5. Skylar and Ray, "Digital Communications", 2th Edition, Pearson Education, 2001.
6. Rao, "Digital Communications", 2th Edition, TMH, 2017.

PCC-EC12	**Digital Signal Processing**	**2L: 1T: 0P (3 hrs.)**	**Credits: 03**

Recommended Prerequisite: Mathematics

Course Objective: The purpose of this subject is to make the students learn about theoretical basis of DSP, with the method of description of discrete and digital signals and systems in the domain-and transform domain, including discrete and Fast Fourier Transform and also learn the different DSP processor.

MODULE I   (9 hrs.)
Discrete-time signals, discrete-time systems, the z-Transform, Analysis of linear time-invariant systems in the z- domain, Analysis of stability and causality in z domain, block diagrams and signal flow graph representation of digital network, matrix representation.

MODULE II   (9 hrs.)

Frequency Analysis of Discrete Time Signal: Discrete fourier series (DFS), properties of the DFS, discrete Fourier transform (DFT), properties of DFT, two dimensional DFT, circular convolution

MODULE III   (8 hrs.)
Efficient Computation of the DFT FFT algorithms, decimation in time algorithm, decimation in frequency algorithm, decomposition for N^r composite number.

MODULE IV   (6 hrs.)
Digital filters Design Techniques Design of IIR and FIR digital filters, Butterworth, Chebyshev and Elliptic Approximations, impulse invariant and bilinear transformation, windowing techniques rectangular and other windows, examples of FIR filters, design using windowing.

MODULE V   (9 hrs.)
Fundamentals of DSP: DSP Architecture, compare with other processor, architecture of TMS320C 5416/6713/DSP56374 architecture, Bus Structure & memory, CPU, addresses modes. Multiplier and Multiplier accumulator, Modified Bus Structures and Memory access in P-DSPs, Multiple access memory , Multi-ported memory , VLIW architecture, Pipelining , Special Addressing modes in P- DSPs , On chip Peripherals, Computational accuracy in DSP processor, Von Neumann and Harvard Architecture, MAC.

Assessment: Mid-term test, Assignment, Tutorial, Quiz and End semester exam.

Course outcome:

Students earning credits will develop ability to:

1. Analyze and Implement the discrete time LTI system, Z-Transform to realize the digital network and evaluate ROC.
2. Compute DFT by using FFT algorithm to analyze the complex discrete sequence.
3. Design IIR and FIR filters and evaluate the performance of digital filters.
4. Understanding the fundamentals of DSP Processors.

5. Understanding the different architecture of DSP Processor.

Text/Reference Books:

1. Oppenheim and Schafer: Digital Signal Processing, PHI Learning.1975.
2. Proakis: Digital Signal Processing, Pearson Education.2009
3. Sanjay Sharma, "Digital Signal Processing" 5th Edition, S. K. Kataria & Sons. 2009.
4. Ingle and Proakis, "Digital Signal Processing- A MATLAB based Approach, Thompson, Cengage Learning.2012.

PCC-EC12(P)	Digital Signal Processing	0L: 0T: 2P (2 hrs.)	Credits: 01

List of Experiments:

7. Write a MATLAB program for Addition, Subtraction, Multiplication & Division operation.
8. Generation, analysis and plots of discrete-time signals (Module impulse, Module step, Ramp).
9. Generation, analysis and plots of discrete-time signals (Sine, Cosine).
10. Implementation the scaling, shifting and folding operations on discrete time sequences.
11. Computation and plot of DFT of sequences.
12. Computation and plot of IDFT of sequences.
13. Computation and plots circular convolution of two sequences.
14. Compute the DFT & IDFT of sequences using FFT Algorithm.
15. Computation and plot poles and zeros of Z-transform.
16. IIR filter design using bilinear transformation

Assessment: Internal viva, Continuous evolution of experiments, Journal write-up, Quiz and End semester exam.

Course outcome:

Students earning credits will develop ability to:

1. Analyze and Implement the discrete time LTI system, Z-Transform to realize the digital network and evaluate ROC.
2. Compute DFT by using FFT algorithm to analyze the complex discrete sequence.
3. Design IIR and FIR filters and evaluate the performance of digital filters.
4. Understanding the fundamentals of DSP Processors.
5. Understanding the different architecture of DSP Processor.

Text/Reference Books:

1. Oppenheim and Schafer: Digital Signal Processing, PHI Learning.1975.
2. Proakis: Digital Signal Processing, Pearson Education.2009
3. Sanjay Sharma, "Digital Signal Processing" 5th Edition, S. K. Kataria & Sons. 2009.

PEC- EC01 (A)	Electromagnetic Theory& CNTL	3L: 0T: 0P (03 hrs.)	Credits: 03

Recommended Prerequisite: Engineering, Physics, and Mathematics.

Course Objective: The purpose of this subject is to cover the underlying concepts and techniques used in EMT & also how EM-waves travel in the medium. In this subject we discuss various principles, standards and modes for propagation of waves. Also fundamentals of transmission lines theory are studied in the subjects.

MODULE I (8 hrs.)
Transmission line fundamentals: Transmission line fundamentals: Voltage and current on a transmission line, infinite line, characteristic impedance and propagation constant, waveform distortion, attenuation and phase equalizers, reflection coefficient, standing wave ratio, open and short circuit lines. Smith chart and impedance matching using transmission lines.

MODULE II (8 hrs.)
Characteristic Parameters of symmetrical and asymmetrical two port networks and their design Image impedance, iterative impedance, characteristic impedance symmetrical and asymmetrical attenuators and their design. Passive LC Filters Analysis and design of Low pass, high pass, band pass and band elimination filters, m-derived filters.

MODULE III (8 hrs.)
Electromagnetism and Maxwell's Equations: Basic of vector calculus, Basics of electrostatics Gauss law, Boundary relations. Electric field in dielectric and conductor, continuity equation, methods of images. Basic laws of magnetostatics, Ampere's law, Boundary conditions, vector magnetic potential, magnetization vector and its relation to magnetic field. Development of Maxwell's Equation

MODULE IV (8 hrs.)
Uniform plane waves: Wave equations and their solutions, wave polarization, Poynting vector, phase and group velocity, Plane electromagnetic waves in free space, dielectric medium and conducting medium, Skin depth.

MODULE V (8 hrs.)
Waves at interface of different mediums: Waves propagation in lossy dielectrics, plane waves in lossless dielectrics, reflection of a plane wave at normal incidence, reflection of a plane wave at oblique incidence, Brewster's angle.

Assessment: Mid-term test, Assignment, Tutorial, Quiz and End semester exam.

Course outcome:

Students earning credits will develop ability to:

1. Analyze transmission line and find the line parameter at various points in different load conditions.
2. Apply various principles related to EM field to real life problems.
3. Analyze plane wave as solution to specific application and can find the effect of medium on wave propagation.
4. Analyze the EM wave propagation to real life mediums which can be classified as lossy and lossless mediums.
5. Understand the effects and parameters associated with different layers of atmosphere affecting the propagation of EM waves.

3. David K. Cheng, "Field and Wave Electromagnetics**"**, 2nd Edition, Pearson, 2003.
4. Matthew N.O. Sadiku, "Elements of Electromagnetics**"**, 4th Edition, Oxford University Press, 2017.
5. B. Singh, H. Hiziroglu, "Electromagnetic field theory fundamentals", 2nd Edition, Oxford Press, 2005.
6. E. Jordan, K. G. Balman, "Electromagnetic waves and radiating system", 2nd Edition, Prentice Hall India, 2002.

PEC- EC01 (B)	Data Communication	3L: 0T: 0P (03 hrs.)	Credits: 03

Prerequisite: - Communication System, Digital Communication

Course Objective: The course is designed to understand the basic technologies used in data communication like mode of communication, interfacing of devices, medium of communication and detection and correction of errors occurs during data transmission.

MODULE I (8 hrs.)
Introduction to data communication: Components, data representation, data flow and basic model, data representation, Serial & Parallel transmission, Modes of data transmission, Encoding: Unipolar, Polar, Bipolar line & block codes, Data compression, Frequency dependent codes, Run length encoding, Relative encoding, LZ Compression, Image and multimedia compression. Review of a n a l o g & digital transmission methods

MODULE II (8 hrs.)
Multiplexing: FDM, TDM, WDM, Synchronous & Statistical TDM, North American digital multiplexing hierarchy, European TDM, Spread spectrum: Frequency Hopping & Direct Sequence spread spectrum, terminal handling & polling. Switched Communication Networks: Circuit, Message, Packet & Hybrid Switching, Soft switch Architecture with their comparative study, X.25, ISDN, OFDM.

MODULE III (8 hrs.)
Physical Layer: Introduction, Interface, Standards, EIA-232-D, RJ-45, RJ-11, BNC connector & EIA-449 digital Interface: Connection, specifications & configuration, X.21 Modem: Types, features, signal constellation, block schematic, limited distance, dial up, baseband, line driver, Group Band and Null modems etc., ITU-T V-series modem standards Connecting Devices: Active and Passive Hubs, Repeaters, Bridges, Two & Three layer switches & Gateway. Study of various types of topology and their comparative study

MODULE IV (8 hrs.)
Transmission Media: Transmission line characteristics, Guided Media: Unguided media, Telephone Network, Digital Subscriber Line: ADSL, HDSL, SDSL, VDSL, and Cable TV network for data transfer.

MODULE V (8 hrs.)
Transmission Errors: Content Error, flow integrity error, methods of error control, Error detection, Error correction, Bit error rate, Error detection methods: Parity checking, Checksum Error Detection, Cyclic Redundancy Check, Hamming code, Interleaved codes, Block Parity, Convolution code, Hardware Implementation, Checksum .

Course Outcomes:

Students earned credits will develop ability to

1. Illustrate the different modes of data transmission, encoding techniques.
2. Illustrate the different types of multiplexing technique and switching techniques.
3. Illustrate the interfacing and connecting devices and standards used in communication.
4. Summarize the Different types of media of transmission and networks.
5. Analyze the problem of errors in communication and technique of error detection and corrections in transmission.

Text/Reference Books:

1. Behrouz A Forouzan, "Data communication and networking", 4th edition, McGrawHill Education, 2017.
2. Tanenbaum A. S., "Computer Networks", Pearson Education, 5th edition, 2011.
3. William Stallings, "Data & Computer Communication", Pearson Education, 8th edition, 2006.
4. Comer, "Internetworking with TCP/ IP Vol-1", Pearson education, 6th edition, 2015.

5. S .Salivahanan, "Digital signal processing": Tata McGraw-Hill Education. 2011.

PEC- EC01 (C)	**Probability Theory and Stochastic processing**	**3L: 0T: 0P (03 hrs.)**	**Credits: 03**

Prerequisite: Probability Theory, Random Processes

Course Objective: The objective is to understand basics concepts of probability theory, random variables, density & distribution functions and stochastic processes.

THEORY:

MODULE I (6 hrs.)
Probability and Random Variable Probability: Probability introduced through Sets and Relative Frequency, Probabilities: Joint, conditional, total, Mathematical Model of Experiments, Bayes' Theorem, Distribution: Binomial, Poisson, Uniform, Gaussian, Exponential, Rayleigh and Conditional,

MODULE II (8 hrs.)
Random Variable: Random Variable: Discrete, Continuous and Mixed Random Variables random variable. Expected Value of a Random Variable, Function of a Random Variable, Moments about the Origin, Transformations of a Random Variable: Monotonic and Non-monotonic transformations.

MODULE III (9 hrs.)
Multiple Random Variables and Operations, Distribution Function and properties: Equal and Unequal, Joint, Sum of Random Variables, Central Limit Theorem, Jointly Gaussian Random Variables: Two Random Variables case, N Random Variable case, Properties, Transformations of Multiple Random Variables, Linear Transformations of Gaussian Random Variables.

MODULE IV (8 hrs.)
Stochastic Processes – Stationary & Non-stationary Process, Deterministic and Nondeterministic Processes, The Stochastic Process Concept, Distribution and Density Functions, First- Order, Second-Order, N^{th} Order and Wide-Sense Stationary process, Ergodicity: Mean, Correlation, Autocorrelation Function, Cross- Correlation and their functions and Properties, Covariance, Linear System Response: Mean and Mean squared Value, Autocorrelation, Cross- Correlation, Gaussian and Poisson random processes.

MODULE V (6 hrs.)
Spectral Characteristics of Power Spectrum and System Response: Properties, Relationship between power Spectrum and autocorrelation function, cross-power Density Spectrum, Properties, Relationship between Cross-Power Spectrum and Cross- Correlation Function,

Assessment: Mid-term test, Assignment, Tutorial, Quiz and End semester exam.

Course outcome:
Students earning credits will develop ability to:
1. Understand the random experiments, sample space and event probabilities
2. Study the random variables, density and distribution functions, moments and transformation of random variables.
3. Study operations on Multiple Random variables, Joint Distribution Function.

4. Understand Mean and covariance functions for simple random processes.
5. Explore the spectral characteristics of random processes.

PCC- EC13(P)	Communication Networks and Transmission Lines Lab	0L: 0T: 2P (02hrs.)	Credits: 01

Prerequisite: Engineering Mathematics, Electromagnetic theory.

Lab Objective: The main objective of CNTL lab is to understand the fundamentals of communication networks and their relation with transmission lines. Study of characteristic impedance, input impedance, attenuators, filters and various types of transmission lines using kits comes under laboratory practical of CNTL.

List of Experiments:

1. To measure the characteristic impedance of a transmission line.
2. To measure the input impedance of a transmission line.
3. To measure the Attenuation of a transmission line.
4. To measure the phase difference between the current and voltage at the input of a transmission line.
5. To draw frequency characteristic of a line.
6. To Study of stationary waves.
7. To plot phase shift along line.
8. To locate the fault within the transmission line.
9. To study transmission line under pulsed condition.

Experiments on virtual labs:

1. Observe the transient phenomenon of terminated coaxial transmission lines in order to study their time domain behavior.
2. Study the behavior of terminated coaxial transmission lines in frequency domain.
3. Introduction to Smith chart and its application for the unknown impedance measurement.
4. Find the change in characteristics impedance and reflection coefficients of the transmission line by changing the dielectric properties of materials embedded between two conductors.

Assessment: Internal viva, Continuous evolution of experiments, Journal write-up, Quiz and End semester exam.

Text/ Reference Books:

1. Umesh Sinha, "Transmission lines and networks", 2nd Edition, SatyaPrakashan, 2016.
2. B. R. Gupta, "Networks filters and transmission lines", 2nd Edition, S. K. Kataria Publication, 2001.
3. J. D. Ryder,"Networks, Lines and Fields", 2nd Edition, Prentice Hall of India, 2008.

PCC- EC14(P)	**Java Lab**	**0L: 0T: 2P (hrs.)**	**Credits: 01**

Prerequisite: Computer Programming

Course Objectives:
1. Understand fundamentals of programming such as variables, conditional and iterative execution, methods, etc.
2. Understand fundamentals of object-oriented programming in Java and be familiar of the important concepts like class, inheritance and multithreading, AWT and JDBC.
3. Students will able to use the Java SDK environment to create, debug and run simple Java programs.

PRACTICALS

List of Experiments:

1. Write a program that accepts two numbers from the user and print their sum.
2. Write a program to calculate addition of two number using prototyping of methods.
3. Program to demonstrate function overloading for calculation of average.
4. Program to demonstrating overloaded constructor for calculating box volume.
5. Program to show the detail of students using concept of inheritance.
6. Program to demonstrate package concept.
7. Program to demonstrate implementation of an interface which contains two methods declaration square and cube.
8. Program to demonstrate exception handling in case of division by zero error.
9. Program to demonstrate multithreading.
10. Program to demonstrate JDBC concept using create a GUI based application for student information.
11. Program to display "Hello World" in web browser using applet.
12. Program to add user controls to applets.
13. Write a program to create an application using concept of swing.
14. Program to demonstrate student registration functionality using servlets with session management.

Course Outcomes:
On the completion of this course students will be able to understand:

1. Understand concepts of Java programming
2. The basic terminology used in computer programming and write, compile and debug programs in JAVA language.

3. Analyze different data types, decision structures, loops, functions to design Java programs.
4. Develop program using the java collection API as well as the java standard class library.
5. Develop Java applets

SBC- EC04(P)	Electronics Workshop-III (IOT & Embedded System Design)	0L: 0T: 4P (2 hrs.)	Credits: 02

Course Objective: The purpose of this lab is to learn, implement and simulation of various embedded system using different controllers.

List of Experiments:

1. Write a program in embedded c to blink LED on PORT1 of 8051.
2. Write a program in embedded c to transfer one byte of data on serial port of 8051.
3. Write a program in embedded c for 8051 to control motor speed using PWM.
4. Write a program in embedded c to blink LED on PORTA of pic16f877a.
5. Write a program in embedded c to transfer one byte of data on serial port of pic16f877a.
6. Write a program in embedded c for pic16f877a to control motor speed using PWM.
7. Write a program in embedded c to blink LED using AVR controller.
8. Write a program in embedded c to transfer one byte of data on serial port of AVR controller.
9. Write a program in embedded c for pic16f877a to control motor speed using AVR controller.
10. Write a program in embedded c to blink LED using ARM controller.
11. Write a program in embedded c to sense obstacle using Arduino UNO.
12. Write a program in embedded c to sense different type of gases using Arduino UNO.
13. Write a program in embedded c for Arduino UNO to control motor speed using PWM.

Assessment: Internal viva, Continuous evolution of experiments, Quiz and End semester exam.

Course outcome:

1. The students will be able to analyze the mathematical and physical foundations of embedded c programming on different controllers.
2. The students will be able to critically evaluate alternate assumptions, approaches, Procedures, tradeoffs, and results during embedded system design.
3. The students will be able to design variety of electronic circuits using embedded systems.
4. The students will be able to demonstrate their design and able to present views.
5. The students will be able to get skilled and deliver technical presentation.

IPS Academy, Institute of Engineering & Science

(A UGC Autonomous Institute, Affiliated to RGPV, Bhopal)

Scheme Based on AICTE Flexible Curriculum

Department of Computer Science & Engineering

Bachelor of Technology (B.Tech.)

IFC Offered by Data Science branch

IFC-DS-001	Foundation of Data Science	2L : 0T : 0P (2 hrs.)	2 credits

Course Objective: This course provides a concise introduction to the fundamental concepts of Data Science

Course Contents :(25 hrs)

Module1: (5 hrs.)

Introduction: What is Data Science? Big Data and Data Science – Datafication - Current landscape of perspectives - Skill sets needed; Matrices - Matrices to represent relations between data, and necessary linear algebraic operations on matrices Statistics: Descriptive Statistics: distributions and probability -

Module 2: (05 hrs.)

Data preprocessing: Data cleaning - data integration - Data Reduction Data Transformation and Data Discretization. Evaluation of classification methods –Exploratory Data Analysis - Basic tools (plots, graphs and summary statistics) of EDA,

Module 3: (5 hrs.)

Introduction to Machine Learning Concepts: Association Rule mining - Linear Regression Logistic Regression- Classifiers - k-Nearest Neighbors (k-NN), k-means -Decision tree **-**

Module 4: (05 hrs.)

Clustering: Choosing distance metrics - Different clustering approaches - hierarchical agglomerative clustering, k-means (Lloyd's algorithm), - DBSCAN - Relative merits of each method - clustering tendency and quality.

Module 5: (05 hrs.)

Case Studies/Projects related to data science.

Course Outcome:

1. State the overview of the Data Science.
2. Explain the process of Data preprocessing.
3. Discuss the various Machine Learning Algorithms.
4. Explain the clustering techniques.
5. Discuss the usage of Data Science technologies.

OEC-EC501 (A)	Foreign language (German/French)	3L: 0T: 0P (3hrs.)	3 credits

Course Objective: To acquaint students with French and impart an understanding of the language at the beginner level.

Course Outcome: The student will be able to understand French grammar and hold a simple conversation in French.

MODULE I (8 hrs.)
Se présenter et présenter sa famille, Saluer, Les nationalites, Les nombres, Décrire une personne (son physique et son caractère)
Grammaire - Les verbes au présent, Les adjectifs possessifs

MODULE II (8 hrs.)
Décrire et situer un logement, Parler d'une ville et de ses commerces
Grammaire - Les pronoms interrogatifs où et combien de, Les articles contractés, Les prépositions de situation

MODULE III (8 hrs.)
Exprimer les goûts et les préférences, Décrire des vêtements et des couleurs, Parler des activités de loisirs
Grammaire - Les adjectifs démonstratifs, Les quantités

MODULE IV (8 hrs.)
Indiquer l'heure ou la date (le calendrier), Indiquer la fréquence d'une activité, Parler des préférences alimentaires (plats et boissons), Commander dans un restaurant
Grammaire - Les verbes pronominaux

MODULE V (9hrs.)
Décrire le temps, Parler des vacances, Réserver un billet et une chambre d'hôtel
Grammaire - Le passé composé

OEC-EC501 (B)	Soft Skills & Interpersonal Communication	3L:0T:0P	3 credits

Course Objectives:
The course will help students to learn effective communication skills, group and team building skills. It will help them to learn the goal setting process and thus become more effective in achieving it.

Course Contents:
MODULE I
Introduction to Soft Skills
Importance of Soft Skills, Effective Communication Skills, Verbal: Oral and Written, Merits and Demerits. Non Verbal: Kinesics, Proxemics, Haptics, Chronemics, Paralanguage, Sign/Symbol, Meta Communication, and Cultural differences in Non-Verbal Communication.

MODULE II
Aspects of Communication
Process of Listening, Types of Listening, Barriers to Listening, Strategies to Develop Listening Skills, Listening Comprehension, Culture as Communication, Communicating across Cultures, Communication Breakdown and ways to overcome

MODULE III
Interpersonal Skills
Introduction and Importance to Interpersonal Skills, Personal Attributes, Interpersonal Attributes, Decision making, Creative Problem Solving, Dealing with Glossophobia, , Logical Reasoning Tony Buzan's Mind Mapping Techniques: Argumentation, Inductive, Deductive reasoning, Persuasion

MODULE IV
Group Behavior
Leadership skills, Team Management, Group Dynamics, Negotiation, Assertiveness, Emotional Intelligence

MODULE V
Practical Approach to Soft Skills and Interpersonal Skills
Case Studies, SWOC Analysis and Goal Setting, Mindfulness Training, Brain Storming, Group Discussion, Team Building Activities.

Course Outcome:
1. Students will able to develop knowledge, skills and interpret their soft skills and practice correct body language.

2. The students will analyze necessary listening skills in order to follow and comprehend discourse such as presentations, conversations, interviews, discussions and will able to distinguish among multicultural communication
3. The student will be able to demonstrate effective interpersonal communication in a variety of settings and solve a problem by applying appropriate problem-solving techniques.
4. Students will develop an understanding of change processes and be able to think critically about obstacles to change.
5. The students will be able to practice effective communication skills and presentation skills

2. Communication Skill for Engineers and Scientist by Sangeeta Sharma and Vinod Mishra, PHI Learning, New Delhi, 2015.
3. Developing Communication Skill by Krishna Mohan, Meera Banerji, McMillan India Limited, 2018.
4. Effective Listening Skills by Kratz, Abby Robinson. Toronto: ON: Irwin Professional Publishing, 1995.
5. Soft Skill for Everyone by Jeff Butterfield, Cengage Leaning, New Delhi, 2010

Reference Books:

1. Theories of Personality by Hall, Calvin S. et al. . New Delhi: Wiley. rpt. 2011.
2. Corporate Conversations by Holtz, Shel. New Delhi: PHI. 2007.
3. The Art of Public Speaking by Lucas, Stephen E. McGraw-Hill Book Co. International Edition, 11th Ed. 2014.
4. Winning at Interviews by Thorpe, Edgar and Showick Thorpe. Pearson Education. 2004.
5. Business Communication for Managers by Penrose, John M., et al. New Delhi: Thomson South Western. 2007

OEC-EC501 (C)	**Business Communication**	**3L:0T:0P**	**3 credits**

Course Objectives:
The course is designed to hone the communication skills of the students and enable them to be an integral part of the corporate world by providing an overview of prerequisites to business communication.

Course Contents:
MODULE I
Communication: It's Interpretation
Basics of Communication: Process, Components and Factors of Communication. Types of Communication, Global Aspects, Ethical Aspects, Legal Aspects, Gender Communication, Communication in Organization, Communication during crisis

MODULE II
Communication Core
Difficult Communication, Communication Skills for Team and Leadership Effectiveness, Managerial Communication, Organizational Communication, Persuasive Communication, Strategic Negotiation Skills for Leaders, Intercultural Communication Competence, Cultural studies

MODULE III
Communication and Digitalization
Fundamentals of Strategic, Institutional & Managerial Communication, Technologies of Mass Communication in the Digital Era

MODULE IV
Business Correspondence
Writing Skills in business and public administration in India: Effective writing, Job Application, Bio Data, Curriculum Vitae, Resume, Notice, Agenda & Minutes of meetings, Memorandum

MODULE V
Presentation Skills:
Elements of Presentation, Tips for Effective Presentation, Practice and Perform (Presentation prepared by the students will be evaluated)

Course Outcome:

1. To develop knowledge, skills, and judgment around human communication that facilitates their ability to work collaboratively professionally.
2. To develop an ability to understand the different types of communication and demonstrate an ability to better understand and adapt to others and their behaviors

3. To apply changes to distinguish mass communication and media in the digital era.
4. To apply to draft effective business correspondence with brevity and clarity to maintain healthy business relationship.
5. To learn to demonstrate students verbal and non-verbal communication ability through presentations.

Text Books:

5. Professional Communication by Aruna Koneru, Tata McGraw-Hill Publishing Company Limited, New Delhi,2005
6. Effective Technical Communication by M. Ashraf Rizvi, Tata McGraw-Hill Publishing Company Limited, New Delhi,2005
7. Communication Skill for Engineers and Scientist by Sangeeta Sharma and Vinod Mishra, PHI Learning, New Delhi, 2015
8. Business Communication by Dr. V.G. Sadh, Thakur Publications, Lucknow,2013
9. Business Correspondence and Report Writing by R.C. Sharma and Krishna Mohan, Tata McGraw-Hill Publishing Company Limited, New Delhi,2008

3. Guffey, Mary Ellen. Essentials of Business Writing. Ohio: SouthWestern College Pubg., 2000.
4. Hughes, Shirley. Professional Presentations: A Practical Guide to the Preparation and Performance of Successful Business Presentations. Sydney: McGraw-Hill, 1990
5. Monippally, Matthukutty, M. Business Communication Strategies. New Delhi: Tata McGraw-Hill Publishing Company Ltd., 2001.

OEC-EC501 (D)	**Stress Management**	**3L:0T:0P**	**3 credits**

Course Objectives

The objective of this course is to enable students to understand and learn how to use various techniques and determine the most appropriate method to aid in managing reaction to stress.

Course Contents
MODULE I
Introduction to Stress

Introduction to stress: Meaning, Definition, Eustress and Distress, Types of stress: Acute stress, Episodic Acute stress and chronic stress, Signs and Symptoms

MODULE II
Causes of Stress

Psychological, Social, Environmental, Academic, Family and Work stress, Adaptive and Maladaptive Behavior, Individual and Cultural Differences

MODULE III
Consequences of Stress:

(i) Physiological Impact of stress -Autonomic Nervous System Changes, Changes in Brain, General adaptive syndrome (GAD), Quality of sleep, Diet and Health effects (ii) Psychological Impact of stress - Impaired Mental functions, Poor memory (iii) Social Impact of stress - Stressful Life Events, Social support and health

MODULE IV
Coping with Stress:

Understanding your stress level, Role of Personality Pattern, Self Esteem, Locus of Control, Role of Thoughts Beliefs and Emotions Coping Mechanisms: - Coping Mechanisms: Appraisal focus Use of Audio and Video Aids , Cultural Activities, Autogenic Training, Biofeedback, Relaxation, Yoga and Meditation Emotional focused and Problem focused , 'Fight or Flight' Response, Stress warning signals

MODULE V
Project based learning:

Project report on Stress Management (Students will prepare and submit a report under the guidance of the mentors)

Course Outcome:

1. Module -1 makes students acquainted with fundamentals of Stress management for the purpose of improving everyday functioning.
2. Students will learn various sources of stress like psychological, Social, Environmental, Academic family and work for the smooth functioning of day to day life.

3. To enable study of stress as a subjective experience and to enable practical approach with measurable levels of stress, using various physiological tests.
4. To describe a number of self-help approaches to stress-prevention and resilience-building through cognitive-behavioral therapy.
5. To provide understanding of stress whether it can be positive or negative and ways to deal with it.

Text Books:

1. Greenberg, J. S. (2017). Comprehensive Stress Management (14th edition). New York: McGraw Hill.
2. Roy, Sumita. (2005) Managing Stress: Handle, Control, Prevent Sterling Publisher
