**Recommended Prerequisite:** C Language

**Course Objective:** The objective of the subject is to explore the principles of Object Oriented Programming (OOP) & understand object-oriented concepts & programming.

**Module 1** **(08 hrs)**

Introduction: Object oriented programming, Introduction, Application, characteristics, difference between object oriented and procedure programming, Comparison of C and C++, Cout, Cin, Data Type, Type Conversion, Control Statement, Loops, Arrays and string arrays fundamentals, Function, Returning values from functions, Reference arguments, Overloaded function, Inline function, Default arguments, Returning by reference.

**Module 2** **(08 hrs)**

Object and Classes: Implementation of class and object in C++, access modifiers, object as data type, constructor, destructor, Object as function arguments, default copy constructor, parameterized constructor, returning object from function, Structures and classes, Classes objects and memory, static class data, Arrays of object, Arrays as class Member Data, The standard C++ String class, Run time and Compile time polymorphism.

**Module 3** **(09 hrs)**

Operator overloading and Inheritance: Overloading unary operators, Overloading binary operators, data conversion, pitfalls of operators overloading, Concept of inheritance, Derived class and base class, access modifiers, types of inheritance, Derived class constructors, member function, public and private inheritance.

**Module 4** **(08 hrs)**

Pointer and Virtual Function: Addresses and pointers, the address-of operator & pointer and arrays, Pointer and Function pointer, Memory management: New and Delete, pointers to objects, debugging pointers, Virtual Function, friend function, Static function, friend class, Assignment and copy initialization, this pointer, dynamic type information.

**Module 5** **(07 hrs)**

Streams and Files: Streams classes, Stream Errors, Disk File I/O with streams, file pointers, error handling in file I/O with member function, overloading the extraction and insertion operators, memory as a stream object, command line arguments, printer output, Function templates, Class templates Exceptions, Containers, exception handling.

**Assessment:** Mid-term test, Assignment, Quiz and End semester exam.

**List of Experiments:**

Write a program

1. To find out the largest number using function.
2. To find the area of circle, rectangle and triangle using function overloading.

**IPS Academy, Institute of Engineering & Science**  
(A UGC Autonomous Institute, Affiliated to RGPV, Bhopal)  
**Scheme Based on AICTE Flexible Curriculum**  
**Department of Electronics & Communication Engineering**

3. To implement complex numbers using operator overloading and type conversion.
4. To implement using class and object to print bio-data of the students.
5. Defines a class with constructor and destructor which will count number of object created and destroyed.
6. To implement single and multiple inheritances taking student as the sample base class.
7. To add two private data members using friend function.
8. Using dynamic memory allocation to perform 2x2 matrix addition and subtraction.
9. To create a stack using virtual function.
10. To store five student records in a file.
11. To get IP address of the system.
12. To shut down the system on windows operating system

**Assessment:** Internal viva, Continuous evolution of experiments, Journal write-up, Quiz and End semester exam.

**Course Outcomes:**

Students earning credits will develop ability to:

1. Understand the advantage of object oriented programming over procedure oriented programming.
2. Help students to understand the key features of Object Oriented Programming and Methodology like objects, methods, instance, message passing, encapsulation, polymorphism, data hiding, abstract data and inheritance.
3. Develop understanding of pointers and memory management.
4. Able to develop understanding of file input/output and templates.
5. Implement algorithms of complex problems.

| <b>PCC-EC402</b> | <b>Analog Communication</b> | <b>3L: 0T: 2P (05 hrs)</b> | <b>Credits:04</b> |
|------------------|-----------------------------|----------------------------|-------------------|

**Recommended Prerequisite:** Engineering Mathematics

**Course Objective:** The course is designed to cover the fundamentals, principles, concepts, and techniques of analog communication systems like various modulation techniques, data transmission, communication technologies, time-domain and frequency domain multiplexing technique and noise analysis.

**Module 1** **(08 hrs)**

Introduction: Frequency domain representation of signal: Fourier transform and its properties, condition of existence, Fourier transform of impulse, step, signum, cosine, sine, gate pulse, constant, properties of impulse function. Convolution theorem (time & frequency), correlation (auto & cross), energy & power spectral density.

**Module 2** **(08 hrs)**

Amplitude Modulation: Overview of Communication system, Communication channels Need for modulation, Baseband and Pass band signals, Amplitude Modulation: Double side band with Carrier (DSB-C), Double side band without Carrier, Single Side Band Modulation, DSB-SC, DSB-C, SSB-SC, Generation of AM, DSB-SC, SSB-SC, VSB-SC & its detection, Vestigial Side Band (VSB), Design of amplitude modulator.

**Module 3** **(08 hrs)**

Angle Modulation: Introduction and advantages of angle modulation, Types of angle modulation, narrowband FM, wideband FM, its frequency spectrum, transmission BW, methods of generation (Direct & Indirect), detection of FM (discriminators: balanced, phase shift and PLL detector), pre emphasis and de-emphasis.

**Module 4** **(08 hrs)**

Transmitters and receivers: AM transmitter & receiver: Tuned radio receiver & super heterodyne, limitation of TRF, IF frequency, image signal rejection, selectivity, sensitivity and fidelity, Noise in AM, FM, FM transmitter & receiver: Block diagram of FM transmitter & receiver, AGC, AVC, AFC, Design of FM transmitter and Receiver.

**Module 5** **(08 hrs)**

Noise in Communication: Classification of noise, Sources of noise, Noise figure and Noise temperature, Noise bandwidth, Noise figure measurement, Noise in analog modulation, Figure of merit for various AM and FM, effect of noise on AM & FM receivers.

**Assessment:** Mid-term test, Assignment, Quiz and End semester exam.

**List of Experiments:**

1. To perform and analyze the experiment of Amplitude Modulation (DSB Signal) & Calculation of parameters.
2. To perform and analyze the experiment of Amplitude Demodulation (DSB Signal).

**IPS Academy, Institute of Engineering & Science**  
(A UGC Autonomous Institute, Affiliated to RGPV, Bhopal)  
**Scheme Based on AICTE Flexible Curriculum**  
**Department of Electronics & Communication Engineering**

3. To perform and analyze the experiment of SSB Amplitude Modulation.
4. To perform and analyze the experiment of SSB Amplitude demodulation.
5. To study the effect of Local Oscillator Frequency on reception of signal, in super heterodyne Receiver.
6. To perform and analyze the experiment of AVC and AFC (AGC).
7. To perform and analyze the experiment of Frequency Modulation using Varactor Modulator.
8. To perform and analyze the experiment of Demodulation of FM signal using Ratio Detector.
9. To perform and analyze the experiment of Frequency Modulation using Reactance Modulator.
10. To perform and analyze the experiment of Frequency Demodulation using Foster Seeley Detector.
11. To perform and analyze the experiment of Quadrature Detector.
12. To perform and analyze the experiment of De-tuned Resonant Circuit.  
Also simulate all experiments using TinaPro/E-Sim softwares.

**Assessment:** Internal viva, Continuous evolution of experiments, Journal write-up, Quiz and End semester exam.

**Course Outcomes:**

Students earning credits will develop ability to:

1. Able to apply knowledge of time domain & frequency domain to solve communication engineering problems.
2. Analyze various AM based modulation schemes for communication systems.
3. Analyze various angle modulation schemes for communication systems and compare the performance of various analog modulation schemes.
4. To design analog communication systems and illustrate the ability to select an appropriate modulation technique.
5. Analyze and compare the noise performance of various analog communication systems.

|------------------|----------------------------------|----------------------------|-------------------|

**Recommended Prerequisite:** Engineering Mathematics, Electronic Devices.

**Course Objective:** The objective of this course is to deal with integrated circuits which are imperative and versatile requirement in today's electronics. Operational amplifier is a device which is used in various electronics application, such as summer, integrator and differentiator and so on. This course comprehends the introduction of various IC's such as IC-741, LM321, and IC-555 timer. The course also deals with the analysis and design of circuits including analog signal processing using linear ICs.

**Module 1** **(09 hrs)**

Operational Amplifier: Differential amplifier and analysis, Configurations- Dual input balanced output differential amplifier, Dual input Unbalanced output differential amplifier, Single input balanced output differential amplifier, Single input Unbalanced output differential amplifier Introduction of Op-amp, Block diagram, characteristics and equivalent circuits of an ideal Op-amp, Power supply configurations for Op-amp.

**Module 2** **(10 hrs)**

Characteristics of Op-amp: Ideal and Practical, Analysis of TL082 datasheet, Op-amp applications: Design of Inverting and non-inverting amplifier configurations, Summing amplifier, Integrators and differentiators, Instrumentation amplifier, Differential input and differential output amplifier, Voltage-series feedback amplifier, Voltage-shunt feedback amplifier, Log/Antilog amplifier, Triangular/rectangular wave generator, phase-shift oscillators, Wein bridge oscillator, analog multiplier-MPY634, VCO, Comparator, Zero Crossing Detector, Op-amp as filters.

**Module 3** **(07 hrs)**

TIMER: IC-555 Timer concept, Block pin configuration of timer. Design of Monostable, Bistable and Astable Multivibrator using timer 555-IC, Study of LM321 and UA741, Introduction to FM receiver, DTMF Decoder and Receiver.

**Module 4** **(08 hrs)**

Voltage Regulator: simple OP-AMP Voltage regulator, Fixed and Adjustable Voltage Regulators, Dual Power supply, Basic Switching Regulator and characteristics of standard regulator ICs such as linear regulator. Switching regulator and low-drop out regulator.

**Module 5** **(06 hrs)**

Schmitt Trigger, Voltage limiters, Clipper and clampers circuits, Absolute value output circuit, Peak detector, Sample and hold Circuit, Precision rectifiers, Voltage-to-current converter, Current-to-voltage converter.

**Assessment:** Mid-term test, Assignment, Tutorial, Quiz and End semester exam.

**IPS Academy, Institute of Engineering & Science**  
(A UGC Autonomous Institute, Affiliated to RGPV, Bhopal)  
**Scheme Based on AICTE Flexible Curriculum**  
**Department of Electronics & Communication Engineering**

**List of Experiments:**

1. To determine voltage gain and frequency response of non-inverting amplifiers using IC-741.
2. To determine voltage gain and frequency response of inverting amplifiers using IC-741.
3. To verify the working of Op-amp as Voltage Follower.
4. To design test and built Differentiator using Op-amp.
5. To design test and built Integrator Circuit using Op-amp.
6. To design test and built Instrumentation Amplifier.
7. To design Schmitt Trigger Circuit using IC-741.
8. To design and obtain the frequency response of second order Low Pass Filter (LPF) using (IC-741) Op-amp.
9. To design and obtain the frequency response of second order High Pass Filter (HPF) using (IC-741) Op-amp.
10. To design & implement an Astable Multivibrator using IC-555.
11. To design and obtain the frequency response of second order Band Pass Filter (HPF) using (IC-741) Op-amp.
12. To design and obtain the frequency response of second order Band Reject Filter (HPF) using (IC-741) Op-amp.

Also simulate all experiments using TinaPro/E-Sim softwares.

**Assessment:** Internal viva, Continuous evolution of experiments, Journal write-up, Quiz and End semester exam.

**Course Outcomes:**

Students earning credits will develop ability to:

1. Demonstrate and classify various types of feedback amplifier and oscillators in designing of electronic circuits.
2. Demonstrate and classify various types of integrated circuits and their pin configuration and analyze the characteristics of operational Amplifier.
3. Perform and analyze the different mathematical operations using Op-amp.
4. Implementation of IC 555 Timer for different applications.
5. Design voltage regulators for various practical applications.

| <b>PCC-EC404</b> | <b>Control System</b> | <b>2L: 1T: 0P (03 hrs)</b> | <b>Credits:03</b> |
|------------------|-----------------------|----------------------------|-------------------|

**Recommended Prerequisite:** Engineering Mathematics, Network Analysis

**Course Objective:** Control Engineering plays a fundamental role in modern technological systems. The aim of this course is to serve as an introduction to control system analysis and design. A control system consisting of interconnected components is designed to achieve a desired purpose. Modern control engineering practice includes the use of control design strategies for improving manufacturing processes, the efficiency of energy use, advanced automobile control.

**Module 1** **(07 hrs)**

**Introduction to Control system:**

Terminology and classification of control system, examples of control system, Laplace Transform and its application, mathematical modeling of mechanical and electrical systems, differential equations, transfer function, block diagram representation and reduction, signal flow graph techniques.

**Feedback characteristics of control systems:**

Open loop and closed loop systems, effect of feedback on control system and on external disturbances, linearization effect of feedback, regenerative feedback.

**Module 2** **(07 hrs)**

**Time response analysis:**

Standard test signals, time response of 1<sup>st</sup> order system, time response of 2<sup>nd</sup> order system, steady-state errors and error constants, effects of additions of poles and zeros to open loop and closed loop system.

**Techniques of stability analysis:**

Concept of stability of linear systems, effects of location of poles on stability, necessary conditions for stability, Routh-Hurwitz stability criteria, relative stability analysis, Root Locus concept, Correlation between time and frequency response, Polar plots, Bode Plots, all-pass and minimum-phase systems, log-magnitude versus Phase-Plots, closed-loop frequency response, Nyquist stability criterion, assessment of relative stability using Nyquist plot and Bode plot (phase margin, gain margin and stability).

**Module 3** **(09 hrs)**

**Frequency response analysis:**

Correlation between time and frequency response, Polar plots, Bode Plots, all-pass and minimum-phase systems, log-magnitude versus Phase-Plots, closed-loop frequency response.

**Frequency domain stability analysis:**

Nyquist stability criterion, assessment of relative stability using Nyquist plot and Bode plot (phase margin, gain margin and stability).

**IPS Academy, Institute of Engineering & Science**  
(A UGC Autonomous Institute, Affiliated to RGPV, Bhopal)  
**Scheme Based on AICTE Flexible Curriculum**  
**Department of Electronics & Communication Engineering**

**Module 4**

(09 hrs)

**Approaches to system design:**

Design problem, types of compensation techniques, design of phase-lag, phase lead and phase lead-lag compensators in time and frequency domain, proportional, derivative, integral and PID compensation.

**Module 5**

(08 hrs)

**State space analysis:**

State space representation of systems, block diagram for state equation, transfer function decomposition, solution of state equation, transfer matrix, relationship between state equation and transfer function, controllability and observability, application of control system in compensator design and its practical implementation using MATLAB.

**Assessment:** Midterm test, Assignment, Tutorial, Quiz and End semester exam.

**Course Outcomes:**

Students earned credits will develop ability to:

1. Provide sound knowledge in the basic concepts of linear control theory and design of control system.
2. Provide adequate knowledge in the time response of systems and steady state error analysis.
3. Basic understanding of issues related to control systems such as modelling, time and frequency responses of dynamical systems, performance specifications.
4. Techniques for determining stability of systems.
5. Design of various controllers and compensators.

| <b>PCC-EC405</b> | <b>Simulation Lab</b> | <b>0L: 0T: 2P (02 hrs)</b> | <b>Credits:01</b> |
|------------------|-----------------------|----------------------------|-------------------|

**Recommended Prerequisite:** Engineering Mathematics, C Language

**Course Objective:** The objective of this laboratory is to provide the basic knowledge of MATLAB/MATLAB-Simulink/Scilab software which is used to simulate and implement the trigonometry formula, effect of variation in controller parameter on system response, solve system equations in state-variable form.

**List of Experiments:**

1. Familiarize with the MATLAB/MATLAB-Simulink/Scilab environment and running some basic commands.
2. To determine transpose, inverse values of given matrix.
3. To perform addition, subtraction, multiplies and divides of binary number of Digital System.
4. To plot Pole Zero Map of a discrete transfer function using MATLAB/MATLAB-Simulink/Scilab simulation.
5. To generate the amplitude modulated wave using MATLAB/MATLAB-Simulink/Scilab simulation.
6. To generate frequency modulated wave using MATLAB/MATLAB-Simulink/Scilab simulation.
7. To generate & analyze CRC code of given data.
8. To evaluate the stability of a system using state space model.
9. To perform operation in image processing for analyzing an image using MATLAB/Scilab.
10. To implement the trigonometry formula using MATLAB/MATLAB-Simulink/Scilab Simulink.

**Assessment:** Internal viva, Continuous evaluation of experiments, Journal write-up, Quiz and End semester exam.

**Course Outcomes:**

Students earning credits will develop ability to:

1. Aware of MATLAB/MATLAB-Simulink/Scilab software and perform basic programs.
2. Perform Real time application and know about basic key features of MATLAB/MATLAB-Simulink/Scilab software
3. Develop a program related to control system in MATLAB/MATLAB-Simulink/Scilab software.
4. Develop a program related to data communications in MATLAB/MATLAB-Simulink/Scilab software.
5. Generate and analyze the image using image processing tool box in MATLAB/MATLAB-Simulink/Scilab software.

|------------------|---|----------------------------|-------------------|

**Recommended Prerequisite:** Electronic devices

**Course Objective:** The purpose of this lab is to learn, implement and simulation of various electronic circuit for sensors and actuators.

**List of Experiments:**

1. To design and simulate temperature sensor LM35 circuit.
  2. To design and simulate LDR based light intensity detector circuit.
  3. To design and simulate IR based black and white line detector circuit.
  4. To design and simulate 72xx hall effect sensor circuit.
  5. To design and simulate MIC based sound intensity detector circuit.
  6. To design and simulate PIR sensor based human detector circuit.
  7. To design and simulate CT based current measurement circuit.
  8. To design and simulate circuit to control DC fan using LM35 temperature sensor.
  9. To design and simulate circuit to control DC bulb using LDR sensor.
  10. To design and simulate circuit to measure RPM of DC motor using 72xx sensor.
- Simulate of experiments can be done using TinaPro /E-Sim /Tinkercad Softwares.

**Assessment:** Internal viva, Continuous evolution of experiments, Quiz and End semester exam.

**Course Outcomes:**

Students earning credits will develop ability to:

1. Analyze the mathematical and physical foundations of electronic sensors and their circuits.
2. Critically evaluate alternate assumptions, approaches, procedures, tradeoffs, and results during electronic sensor circuit designing.
3. Design variety of electronic sensor circuits using simulation software.
4. Demonstrate their design and able to present views.
5. Get skilled and deliver technical presentation.

**Recommended Prerequisite:** Nil

**Course Objective:** The objective of the subject is to develop the optimizing skills of technology-use in engineering problems, to explore the potential of students in economic perspective of engineering professional goals & also understanding the need of entrepreneurship and the financial reports of a business.

**Module 1** **(04 hrs)**

Nature and scope of economics, Economic cyclic flow, Central Economic problems, macro and micro economics, concept, determinants and law of demand and supply.

**Module 2** **(04 hrs)**

Production, cost and Revenue: Production function, laws of return to variable proportion, Laws of return to scale, cost concepts, cost functions and their inter relation, Revenue Concepts and functions, break- even analysis, Meaning of financial services types, players in financial services, merchant banking functions, managing new issue, venture capital, need, functions.

**Module 3** **(04 hrs)**

Entrepreneur, entrepreneurship and start-up, characteristics of an entrepreneur, forms of business organization, phases of startup, small medium and large scale enterprise, problems, opportunities, Design Thinking and Ideation. Business model.

**Module 4** **(04 hrs)**

Accountancy: Accountancy and bookkeeping, Assets, Liabilities and Capital, types of accounts, Journal, Ledger, Trial Balance and Financial Statements, Financial Ratio Analysis, Annual report analysis of businesses.

**Module 5** **(04 hrs)**

Pricing and Market: Price determination and firm's equilibrium under perfect competition and monopoly, price-output determination under monopolistic competition, kinked demand curve, collusive and non-collusive oligopoly.

**Assessment:** Quiz and End semester exam.

**Course Outcomes:**

Students earning credits will develop ability to:

1. Explain economic cyclic flow and Estimate the demand and demand elasticity for a product.
2. Identify the problems, see the opportunity, and ideate the solution to the problems
3. Analyze the production-cost-profit relation and select the suitable project for investment

**IPS Academy, Institute of Engineering & Science**  
(A UGC Autonomous Institute, Affiliated to RGPV, Bhopal)  
**Scheme Based on AICTE Flexible Curriculum**  
**Department of Electronics & Communication Engineering**

4. Review, summarize and compare the financial statements of an accounting entity and able to apply financial ratio technique for financial analysis.
5. Estimate price and the equilibrium for a firm/organization in different competitive market situations.
