IPS Academy, Institute of Engineering & Science (A UGC Autonomous Institute, Affiliated to RGPV, Bhopal) Scheme Based on AICTE Flexible Curriculum **Bachelor of Technology (B.Tech.) Department of Computer Science & Engineering-AIML** Semester-III

BSC-MA03	Probability & Statistics	2L:1T(4hrs.)	Credits: 3
----------	--------------------------	--------------	------------

Prerequisite:

Course Objective:

The objective of this course is two familiarize the students with statistical techniques, develop statistical skills and increase students' thinking power. It aims to equip the students with standard concepts and tools at an intermediate to advance level that will serve them well towards tackling various problems in the discipline.

Module 1: Data Collection & amp; Analysis

Introduction and importance of statistics, Types of data, Methods of collecting primary data, Methods of sampling, Merits and limitations of sampling, Types of classification, Formation of frequency distribution, Tabulation of data, Frequency distribution, Types of graphs and diagrams, Histogram, Bardiagram, Frequency polygon, Frequency curve, Ogive, Piediagram, Pictogram.

Module 2: Statistical Measures

Measures of central tendency, Arithmetic mean, Median, Mode, Geometric mean, Harmonic mean, Measures of absolute dispersion, Range, Quartile deviation, Average deviation, Standard deviation, Skewness and Kurtosis.

Module 3: Correlation & Correl

Introduction, Significance, Types, Scatter diagram, Karl Pearson's correlation coefficient, Coefficient of correlation, Rank correlation coefficient, Regression lines, Regression equations, Standard error of estimate.

Module 4: Probability Theory

Definition of probability, Mutually exclusive events, Additive law of probability, Compound events, Dependent and independent events, Multiplicative law of probability, Conditional probability, Total probability, Bayes' theorem, Random variables and their properties, Probability mass function, Probability density function.

Module 5: Discrete and Continuous Probability Distributions

Introduction, Discrete distribution: Binomial and Poisson's distribution, Continuous distribution: Normal distribution, Exponential distribution, Gamma & amp; Beta distribution.

(9hrs.)

(8hrs.)

(A UGC Autonomous Institute, Affiliated to RGPV, Bhopal) Scheme Based on AICTE Flexible Curriculum **Bachelor of Technology (B.Tech.)**

Department of Computer Science & Engineering–AIML

Semester-III

Course Outcomes:

- 1. To explain concept of statistic an analysis and find the distribution behind data.
- 2. To explain and apply the basic ideas of statistics including measures of Central tendency.
- 3. To explain and apply the concepts of correlation and regression.
- 4. To define the principal concepts about probability and apply to engineering problems.
- 5. To explain and apply the concepts of probability distribution in evaluation of engineering problems.

- 1. J. Susan Milton and Jesse Arnold, Introduction to Probability and Statistics, McGraw Hills2017
- 2. B. V. Ramanna, Higher Engineering Mathematics, Tata Mc Graw Hill New Delhi, 2017.
- 3. C. Douglas Montgomery and G. C. Runger, Applied Statistic and Probability for Engineers,
- 4. Ronald E. Walpole, Raymond H. Myers, Sharon L. Myers, Probability and Statistics for engineering and Scientist, Pearson Education, 9th Edition, 2011.
- 5. Dr. B. S. Grewal, Higher Engineering Mathematics, Khanna Publishers, 44thEdition, 2020.
- 6. Dr. T.K.V. Iyengar, B. Krishna Gandhi, S. Ranganatham, Dr. M.V.S.S.N. Prasad, Probability and Statics S. Chand Publication,
- 7. A Text Book for Probability and Statistics, Morris H. Degroot,4th Edition 2012

Semester-III

PCC-CL01	Computer Organization & Architecture	2L:1T(4hrs.)	Credits: 3
----------	---	--------------	------------

Prerequisite:

Course Objective:

Students to be familiarize the basic principles of computer architecture, Design and Multiprocessing, Types of data transfer, Concept of semiconductor memories which is useful for research work in field Computer System.

Module 1:

Basic Structure of Computer: Structure of Desktop Computers, CPU: General Register Organization-Memory Register, Instruction Register, Control Word, Stack Organization, Instruction Format, ALU, I/O System, bus, CPU and Memory Program Counter, Bus Structure, Register Transfer Language-Bus and Memory Transfer, addressing modes. Control Unit Organization: Basic Concept of Instruction, Instruction Types, Micro Instruction Formats, Fetch and Execution cycle, Hardwired control unit, Micro- programmed Control unit micro program sequencer Control Memory, Sequencing and Execution of Micro Instruction.

Module 2:

Computer Arithmetic: Addition and Subtraction, Tools Compliment Representation, Signed Addition and Subtraction, Multiplication and division, Booths Algorithm, Division Operation, Floating Point Arithmetic Operation, Number concept 1's and 2's complement representation, addition and subtraction using 2's complement.

Module 3:

I/O Organization: I/O Interface-PCI Bus, SCSI Bus, USB, Data Transfer: Serial, Parallel, Synchronous, Asynchronous Modes of Data Transfer, Direct Memory Access (DMA), I/O Processor.

Module 4:

Memory Organization: Main memory-RAM, ROM, SecondaryMemory –Magnetic Tape, Disk, Optical Storage, Cache Memory: Cache Structure and Design, Mapping Scheme, Replacement Algorithm, Improving Cache Performance, Virtual Memory, memory management hardware

Module 5:

Multiprocessors: Characteristics of Multiprocessor, Inter-Processor Communication and Synchronization. Memory in Multiprocessor System, Concept of Pipelining, Vector Processing, ArrayProcessing, RISC And CISC, StudyofMulticore Processor –Intel, AMD.

(A UGC Autonomous Institute, Affiliated to RGPV, Bhopal) Scheme Based on AICTE Flexible Curriculum Bachelor of Technology (B.Tech.) Department of Computer Science & Engineering–AIML

Semester-III

Course Outcomes:

- 1. Explain the basic structure & components of the computer system, Micro programmed Control Unit.
- 2. Demonstrate the concepts of computer arithmetic.
- 3. Explain the input output organization of the computer system.
- 4. Illustrate memory organization and memory management techniques.
- 5. State the core concepts of multiprocessor and pipelining.

(A UGC Autonomous Institute, Affiliated to RGPV, Bhopal) Scheme Based on AICTE Flexible Curriculum

Bachelor of Technology (B.Tech.)

Department of Computer Science & Engineering-AIML

Semester-III

Prerequisite:

Course Objective:

The objective of this course is to understand different types of data structures and algorithms used in program.

Module 1:

Review of C++ programming language. Introduction to Data Structure: Concepts of Data and Information, Classification of Data structures, Abstract Data Types, Implementation aspects: Memory representation. Analysis of algorithm: Time Complexity and Space Complexity, Data structures operations and its cost estimation, Basic of Asymptotic notation. Introduction to linear data structures- Arrays, String, representation & Operations, Linked List: Representation of linked list in memory, different implementation of linked list. Circular linked list, doubly linked list, etc. Application of linked list: polynomial manipulation using linked list, etc.

Module 2:

Stacks: Stacks as ADT, Different implementation of stack, multiple stacks. Application of Stack: Conversion of infix to postfix notation using stack, evaluation of postfix expression, Recursion. Queues: Queues as ADT, Different implementation of queue, Circular queue, Concept of Dqueue and Priority Queue, Queue simulation, Application of queues.

Module 3:

Tree: Definitions - Height, depth, order, degree etc. Binary Search Tree - Operations, Traversal, Search, AVL Tree, Heap, Applications and comparison of various types of tree; Introduction to forest, multi-way Tree, Btree, B+ tree, B*tree and red-black tree.

Module 4:

Graphs: Introduction, Classification of graph: Directed and Undirected graphs, etc, Representation, Graph Traversal: Depth First Search (DFS), Breadth First Search (BFS), Graph algorithm: Minimum Spanning Tree (MST)- Kruskal, Prim's algorithms. Dijkstra's shortest path algorithm; Comparison between different graph algorithms. Application of graphs.

Module 5:

Sorting: Introduction, Classification of sorting method, Sort methods like: Bubble Sort, Quick sort. Selection sort, Heap sort, Insertion sort, Shell sort, Merge sort and Radix sort; comparison of various sorting techniques. Searching: Basic Search Techniques: Sequential search, Binary search, Comparison of search methods.

(10hrs.)

(10hrs.)

(A UGC Autonomous Institute, Affiliated to RGPV, Bhopal) Scheme Based on AICTE Flexible Curriculum Bachelor of Technology (B.Tech.) Department of Computer Science & Engineering–AIML

Semester-III

Course Outcomes:

- 1. Understand basic data structures such as arrays, linked lists, stacks and queues.
- 2. Introduce the concept of data structures through ADT including List, Stack, Queues.
- 3. Understand the basic operations of trees and its types.
- 4. Understand the basic concept of graph and its operations.
- 5. Demonstrate and implement searching sorting algorithms.

- 1. Ellis Horowitz, Sartaj Sahni, "Fundamentals of Data Structures" Computer Science Press.
- 2. Mark Allen Weiss "Algorithms, Data Structures, and Problem Solving with C++", Pearson Education (US) 1996

Semester-III

PCC-CL03	Object Oriented Programming & Methodology	2L: 1T(4hrs.)	Credits: 3	
----------	--	---------------	------------	--

Prerequisite: Programming for Problem Solving

Course Objective:

The course is designed to provide complete knowledge of Object-Oriented Programming through and to enhance the programming skills of the students by giving practical assignments to be done in labs. Its main objective is to teach the basic concepts and techniques which form the objectoriented programming paradigm.

Module 1:

Introduction to Object Oriented Programming, Comparison with Procedural Programming, features of Object oriented paradigm, merits and demerits of OO methodology; Introduction to Java Development Kit (JDK) & Java virtual machine (JVM); Linker & Loader; Data Encapsulation: Concept of Classes & Objects; State, Behavior & Identity of an object. Module 2: (08hrs.)

Data Abstraction and Message Passing: Methods, Calling of constructors, Decision making constructs, Control loops, Keywords: this, static; Access modifiers, Arrays within a class, String Class.

Module 3:

Relationship between classes: Generalization- Inheritance, Types of Inheritance, Ambiguity in multiple inheritances, Concept of interfaces; Specialization- Association, Aggregation and Composition; Static and Dynamic Binding: Polymorphism, Method Overriding & Overloading; Keywords: super, abstract, final.

Module 4:

Concept of Packages, Need of package; Basic idea of exception handling, stack based execution and exception propagation, Exception types: Exception Handling Try, Catch, Finally, Throw statement, Assertions.

Module 5:

Overview of Simple threads, Basic idea of Multithreaded Programming, Thread synchronization: Locks, synchronized methods, synchronized block, thread scheduling, Producer-consumer relationship, Daemon thread, Case Study: Chabot implementation etc.

(08hrs.)

(08hrs.)

(08hrs.)

(10hrs.)

(A UGC Autonomous Institute, Affiliated to RGPV, Bhopal) Scheme Based on AICTE Flexible Curriculum Bachelor of Technology (B.Tech.) Department of Computer Science & Engineering–AIML Semester–III

Course Outcomes:

- 1. Understand object-oriented programming concepts, core JAVA, and apply them in solving Problems.
- 2. Develop skill in data abstraction and message passing.
- 3. Understand fundamentals of relationship amongst objects.
- 4. Learn about the need of exception and errors.
- 5. Develop ability to write a computer program to solve specified problems.

- 1. G. Booch, "Object Oriented Analysis & Design", Pearson.
- 2. Barbara Liskov, Program Development in Java, Addison-Wesley, 2001.
- 3. James Martin, "Principles of Object Oriented Analysis and Design", Prentice Hall/PTR.
- 4. Peter Coad and Edward Yourdon, "Object Oriented Design", Prentice Hall/PTR.
- 5. Herbert Schildt, "Java2: The Complete Reference", 7thEdition, McGraw-Hill.

IPS Academy, Institute of Engineering & Science

PCC-CL04 Introduction to Artificial Intelligence	l 2L:0T(2hrs.)	Credits: 2	
---	----------------	------------	--

Prerequisite: Preliminary knowledge of Elementary Statistics.

Course Objective:

The course is designed to demonstrate fundamental understanding of Artificial Intelligence (AI) and its basic principles. Course will cover foundational concepts of AI that require problem solving, inference, perception, knowledge representation, and learning. Students will be able understand the application of Artificial Intelligence techniques for problem solving.

Module 1:

Introduction: Meaning and definition of artificial intelligence, Physical Symbol Sys-tem Hypothesis, production systems, Characteristics of production systems; Breadth first search and depth first search techniques. Heuristic search Techniques: Hill Climbing, Iterative deepening DFS, bidirectional search. Analysis of search methods. A* algorithm, and their analysis.

Module 2:

Introduction to Genetic Algorithms: Knowledge Representation, Problems in representing knowledge, knowledge representation using propositional and predicate logic, logical consequences, syntax and semantics of an expression, semantic Tableau. Forward and backward reasoning. Proof methods, substitution and unification, conversion to clausal form, normal forms, resolution, refutation, deduction, theorem proving, inferencing, monotonic and nonmonotonic reasoning.

Module 3:

Introduction to prolog: Network-based representation and reasoning, Semantic networks, Conceptual Graphs, frames. Description logic (DL), concept language, reasoning using DL. Conceptual dependencies (CD), scripts, reasoning using CD.

Module 4:

Introduction to natural language processing: Adversarial search and Game theory, classification of games, game playing strategies, prisoner's Dilemma. Game playing techniques, mini max procedure, alpha-beta cut- offs. Complexity of alpha-beta search. Automated planning, classical planning problem, forward planning, partial order planning, planning with proposal logic, hierarchical task planning, multi agent planning.

Module 5:

Reasoning in uncertain environments, Fuzzy logic, fuzzy composition relation, operations on fuzzy sets. Probabilistic reasoning, Bayes theorem, construction of Bayesian networks, belief propagation. Markov processes and Hidden Markov models.

HSMS-HS04 Entrepreneurship and Principles of Management	1L: 0T(1hrs.)	Credits: 1	
--	---------------	------------	--

Prerequisite:

Course Objective:

Explain Entrepreneurship and its importance, Describe the importance E-commerce Explain the importance Digital Marketing in current scenario. Describe the importance of planning and organization Structure. Discuss the control process and its elements

Module 1:

Entrepreneurship: Definition, requirements to be an entrepreneur, entrepreneur and intrapreneur, entrepreneur and manager, growth of entrepreneurship in India, Types of Enterprises and **Ownership Structure.**

Module 2:

E-commerce and its Technological Aspects: Overview of developments in Information Technology and Defining E-Commerce: The scope of E commerce, Benefits and limitations of E- Commerce.

Module 3:

Introduction to Digital Marketing: Evolution of Digital Marketing from traditional to modern era, Role of Internet, Search Engine Advertising, Display marketing, Social Media Marketing.

Business Management: Definition, Functions, Process, Scope and Significance of Management. Nature of Management, Managerial Roles, Managerial Skills and Activities, Propritership, Ltd.,

Indian startup policy, MP startup policy, Closing a company, Leadership aspects.

Module 4:

Pvt. Ltd., Company act registration, Startup India, DPIIT, Yukti Portal, Gumasta Lisences,

Module 5:

Management Functions: Nature, Scope, Objective and Significance, Elements and Steps of Planning & organizing, Delegation and Decentralization. Formal and Informal Organizations Directing: Effective Directing, Supervision, Different Theories of Motivation, Controlling and Coordinating: Elements of Managerial Control, Control Systems, Management Control Techniques, Coordination Concept, Importance, Principles and Techniques of Coordination.

Bachelor of Technology (B.Tech.)

Department of Computer Science & Engineering-AIML

Semester-III

Prerequisite:

Course Objective:

Students to be familiarize the basic principles of computer architecture, Design and Multiprocessing, Types of data transfer, Concept of semiconductor memories which is useful for research work in field Computer System.

Module 1:

Introduction to Desktop Computers, Introduction to 8085 microprocessor,8085 Instruction set, Flags, Logic Gates, Combinational circuits, Multiplexer, Demultiplexer. **Module 2:**

Introduction to Binary number systems, 1's & 2's Complement, Arithmetic Operations, Half adder, Half subtractor, Full Adder and Full Subtractor.

Module 3:

Introduction to Assembly Language, Programming Arithmetic and Logic Operations, Shift Operations, Program Loops.

Module 4:

Memory Hierarchy, Main Memory, Types of Memory, Memory Allocation Methods, Virtual Memory, Page Replacement Algorithms.

Module 5:

Characteristics of Multiprocessor, RISC And CISC, Study of Multicore Processor-Intel, AMD.

(A UGC Autonomous Institute, Affiliated to RGPV, Bhopal) Scheme Based on AICTE Flexible Curriculum **Bachelor of Technology (B.Tech.)**

Department of Computer Science & Engineering–AIML Semester–III

Course Outcomes:

- 1. Explain the basic structure & components of the computer system, 8085 Micro Processor.
- 2. Demonstrate the concepts of computer arithmetic.
- 3. Demonstrate the concepts of Assembly Language.
- 4. Illustrate memory organization and memory management techniques.
- 5. State the core concepts of multiprocessor.

- 1. Case study of Desktop Computers
- 2. Study of Multiplexer and Demultiplexer
- 3. Write Program to demonstrate Flags in microprocessor 8085.
- 4. Study of Half Adder and Half Subtractor.
- 5. Study of Full Adder and Full Subtractor.
- 6. Write a program to add the contents of memory locations 4000H and 4001H and place the result in memory location 4002H.
- 7. Write a program to multiply two 8-bit numbers stored in memory locations 2200H and 2201H byre petitive addition and store the result in memory locations 2300H and 2301H.
- 8. Program for simulate memory allocation strategies (Firstfit, Bestfit, Worst fit).
- 9. Programs for page replacement algorithms.
- 10. Case study of RISC And CISC.

(A UGC Autonomous Institute, Affiliated to RGPV, Bhopal) Scheme Based on AICTE Flexible Curriculum

Bachelor of Technology (B.Tech.)

Semester-III

PCC-LC-CL02 (P) Data Structure & Algorithm Lab	02P (2hrs.)	Credits: 1
--	-------------	------------

Prerequisite:

Course Objective:

The objective of this course is to understand different types of data structures and algorithms used in program.

Module 1:

Arrays, String, & their representation & Operations.

Linked List: Representation of linked list in memory, different implementation of linked list. Circular linked list, doubly linked list, etc.

Module 2:

Stacks: Stacks as ADT, Different implementation of stack, multiple stacks. Application of Stack: Conversion of infix to postfix notation using stack, evaluation of postfix expression, Recursion, Example of recursion.

Module 3:

Queues: Queues as ADT, Different implementation of queue, Circular queue, Concept of Dequeue and Priority Queue, Queue simulation, Application of queues.

Module 4:

Tree: Definitions - Height, depth, order, degree etc. Binary Search Tree - Operations, Traversal, Search.

Graphs: Introduction, Classification of graph: Directed and Undirected graphs, etc., Representation, Graph Traversal: Depth First Search (DFS), Breadth First Search (BFS)

Module 5:

Sorting: Introduction, Classification of sorting method, Sort methods like: Bubble Sort, Quick sort. Selection sort, Heap sort, Insertion sort. Searching: Basic Search Techniques: Sequential search, Binary search, Comparison of search methods.

(A UGC Autonomous Institute, Affiliated to RGPV, Bhopal) Scheme Based on AICTE Flexible Curriculum **Bachelor of Technology (B.Tech.)**

Department of Computer Science & Engineering–AIML Semester–III

Course Outcomes:

- 1. Understand basic data structures such as arrays, linked lists.
- 2. Introduce the concept of data structures through ADT including stack.
- 3. Understand the basic operations of Queues.
- 4. Understand the basic concept of Tree and Graph and their operations.
- 5. Demonstrate and implement searching sorting algorithms.

- 1. To perform insertion and deletion operations on array. (CO1)
- 2. To perform multiplication operation on matrix. (CO1)
- 3. To implement single linked list. (CO1)
- 4. To implement doubly linked list. (CO1)
- 5. To calculate factorial of number using recursion. (CO1)
- 6. To demonstrate static implementation of stack. (CO2)
- 7. To demonstrate dynamic implementation of stack. (CO2)
- 8. To demonstrate static implementation of Linear queue. (CO3)
- 9. To demonstrate dynamic implementation of Linear queue. (CO3)
- 10. To implement circular queue. (CO3)
- 11. To implement binary search tree. (CO4)
- 12. To perform BFS and DFS operations on graph. (CO4)
- 13. To perform binary search operation. (CO5)
- 14. To perform sorting operation using bubble sort. (CO5)
- 15. To perform sorting operation using insertion sort. (CO5)

Semester-III

PCC-LC-CL03	Object Oriented Programming	02P (2hrs.)	Care ditars 1	
(P)	& Methodology Lab	02P (2nrs.)	Creatts: 1	

Prerequisite: Programming for Problem Solving **Course Objective:**

This course designed to provide knowledge of Object Oriented Programming. It introduces object-oriented programming using the Java programming language. The course is designed to enhance the programming skills of the students by giving practical assignments to be done in labs. Its main objective is to teach the basic concepts and techniques of object oriented programming paradigm. Students will learn how to program in Java and use some of its most important APIs.

Module 1:

Introduction to Object Oriented Programming, Basics of Java programming, Data types, Variables, Operators, Control structures, looping; Introduction to Java Development Kit (JDK) & Java virtual machine (JVM); Linker & Loader; Data Encapsulation: Concept of Classes & Objects.

Module 2:

Data Abstraction and Message Passing: Methods, constructors, Keywords: this, static; Access modifiers, Arrays within a class, String Class.

Module 3:

Relationship between classes: Inheritance, Types of Inheritance, Ambiguity inmultiple inheritances, Concept of interfaces; Specialization- Association, Aggregation and Composition; Static and Dynamic Binding: Polymorphism, Method Overriding & Overloading; Keywords: super, abstract, final.

Module 4:

Concept of Packages, Need of package; Basic idea of exception handling, Exception types: Exception Handling Try, Catch, Finally, Throw statement, Assertions.

Module 5:

Overview of Simple threads, thread life cycle and methods, Runnable interface, Thread synchronization, Basic idea of Multithreaded Programming.

(A UGC Autonomous Institute, Affiliated to RGPV, Bhopal) Scheme Based on AICTE Flexible Curriculum Bachelor of Technology (B.Tech.) Department of Computer Science & Engineering–AIML

Semester-III

Course Outcomes:

- 1. Understand object-oriented programming principles and apply them in solving Problems.
- 2. Develop skill in data abstraction and message passing.
- 3. Understand fundamentals of relationship amongst objects.
- 4. Learn about the need of exception and errors.
- 5. Understand the concept of threads.

- 1. Write a program to show Concept of CLASS in JAVA. (CO1)
- 2. Write a program to show Concept of Constructor in JAVA. (CO2)
- 3. Write a program to show Concept of Arrays in JAVA. (CO2)
- 4. Write a Program to show Inheritance. (CO3)
- 5. Write a program to show Polymorphism (method overloading and overriding) (CO3)
- 6. Write a program to show Interfacing between two classes. (CO4)
- 7. Write a program to show Exception handling. (CO4)
- 8. Write a program to Add a Class to a Package (CO4)
- 9. Write a program to show Life Cycle of a Thread (CO5)
- 10. Write a program to demonstrate multithreading using Java. (CO5)

Semester-III

PCC-LC-CL04(P)	Artificial Intelligence Lab	02P (2hrs.)	Credits: 1
----------------	-----------------------------	-------------	------------

Prerequisite:

Course Objective:

The objective of this course is to understand different types of data structures and algorithms used in program.

Module 1:

Introduction to Prolog and AI Concepts: Overview of Prolog, Introduction to Prolog, Applications and uses of Prolog, Basic AI Concepts, Introduction to Expert Systems, AI applications in various fields

Module 2:

Syntax, Meaning of Prolog Programs, and Basic Problem Solving: Syntax and Meaning of Prolog Programs, Basic syntax and structure of Prolog programs, Data objects in Prolog, Matching in Prolog, Declarative meaning of Prolog programs, Procedural meaning of Prolog programs, Basic AI Problem Solving, Monkey and banana problem

Module 3:

Lists and Operations: Lists in Prolog, Introduction to lists, Representation of lists in Prolog, Operations on Lists, Common list operations, Example programs using lists

Module 4:

Advanced Prolog Concepts and Real-World Applications: Operators and Arithmetic, Operator notation in Prolog, Arithmetic operations in Prolog, Using Structures, Retrieving structured information from a database, Doing data abstraction, Simulating a non-deterministic automaton, Travel planning

Module 5:

Problem Solving and Control Techniques in Prolog: Complex Problems in Prolog, The eight queens' problem, Controlling Backtracking, Techniques to control backtracking in Prolog programs, Example programs illustrating backtracking control.

(A UGC Autonomous Institute, Affiliated to RGPV, Bhopal) Scheme Based on AICTE Flexible Curriculum **Bachelor of Technology (B.Tech.)**

Department of Computer Science & Engineering-AIML Semester-III

Course Outcomes:

- 1. Understand important concepts like Expert Systems, AI applications.
- 2. Solve basic AI based problems.
- 3. Define the concept of Artificial Intelligence.
- 4. Apply AI techniques to real-world problems to develop intelligent systems.
- 5. Select appropriately from a range of techniques when implementing intelligent systems.

- 1. Installation of gnu-prolog, Study of Prolog (gnu-prolog), its facts, and rules.
- 2. Write simple facts for the statements and querying it.
- 3. Write a program for Family-tree.
- 4. Write Program for Monkey-banana Problem.
- 5. Write a program which behaves a small expert for medical Diagnosis.
- 6. Write programs for computation of recursive functions like factorial Fibonacci numbers, etc.
- 7. Write program to solve 5-queens problem.
- 8. Write a Program for water jug problem.
- 9. Write a program for travelling salesman program.
- 10. Case study of standard AI programs like Mycin and AI Shell

(A UGC Autonomous Institute, Affiliated to RGPV, Bhopal) Scheme Based on AICTE Flexible Curriculum

Bachelor of Technology (B.Tech.)

Department of Computer Science & Engineering-AIML

Semester-III

PCC-LC-CL05 (P)	Programming in Python	02P (2hrs.)	Credits: 1
-----------------	-----------------------	-------------	------------

Prerequisite:

Course Objective:

The course is designed to provide Basic knowledge of Python. Python programming is intended for software engineers, system analysts, program managers and user support personnel who wish to learn the Python programming language. Learning Outcomes: Problem solving and programming capability.

Module 1:

Introduction History, Features, Python –Environment Setup Local Environment Setup, Getting Python, Installation of Python, Use of IDE.

Module 2:

Python – Basic Syntax Python Identifiers, Reserved Words, Lines & Indentation, Multiline Statements, Quotation in Python, Comments & other useful constructs, Python –Variables Assigning Values to Variables, Multiple Assignment, Standard Data Types.

Module 3:

Python – Variables, Assigning Values to Variables, Multiple Assignment, Standard Data Types; Python Numbers, Python Strings, Python Lists, Python Tuples, Dictionary, Data Type Conversion.

Module 4:

Python– Basic Operators, Types of Operators, Arithmetic Operators, Comparison Operators, Assignment Operators, Bitwise Operators, Logical Operators, Operator Precedence, Python– Decision Making & Loops, Flowchart, If statement Syntax. Python - Functions, Syntax for defining a function, Calling a Function, Function Arguments, Anonymous Functions Python-Applications & Further Extensions, Data analysis packages.

Module 5:

Python File Operations: Reading files, Writing files in python, Understanding read functions, read(), readline(), readlines(). Understanding write functions, write() and writelines() Manipulating file pointer using seek Programming, using file operations. Database Programming: Connecting to a database, Creating Tables, INSERT, UPDATE, DELETE and READ operations, Transaction Control, Disconnecting from a database, and Exception Handling in Databases.

(A UGC Autonomous Institute, Affiliated to RGPV, Bhopal) Scheme Based on AICTE Flexible Curriculum

Bachelor of Technology (B.Tech.)

Department of Computer Science & Engineering-AIML Semester-III

Course Outcomes:

- 1. Install Python and have knowledge of syntax of Python.
- 2. Describe the Numbers, Math functions, Strings, List, Tuples and Dictionaries in Python.
- 3. Express different Decision-Making statements and Functions.
- 4. Develop code in Python using functions, loops, etc.
- 5. Design GUI Applications in Python and evaluate different database operations.

- 1. Introduction to python programming and python data types. (CO1)
- 2. Python program to find the union of two lists. (CO1)
- 3. Python program to find the intersection of two lists. (CO1)
- 4. Python program to remove the "i" th occurrence of the given word in a list where words repeat. (CO2)
- 5. Python program to count the occurrences of each word in a given string sentence. .(CO2)
- 6. Python program to check if a substring is present in a given string. (CO2)
- 7. Python program to map two lists into a dictionary. (CO3)
- 8. Python program to count the frequency of words appearing in a string using a dictionary. (CO3)
- 9. Python program to create a dictionary with key as first character and value as words starting with that character. (CO4)
- 10. Python program to find the length of a list using recursion. (CO4)
- 11. Python program to read a file and capitalize the first letter of every word in the file. (CO5)
- 12. Python program to read the contents of a file in reverse order. (CO5)

Bachelor of Technology (B.Tech.)

Department of Computer Science & Engineering-AIML

Semester-III

MLC01 Profe	essional Laws, Ethics, Gender, 1man Values and Harmony	1L: 0T(1hrs.)	Credits: 0
-------------	---	---------------	------------

Prerequisite:

Course Objective:

To Understand the concept of Law and relating to Engineers.

Module 1:

Concept of Law: Understanding Essentials of a Valid Contract and he basics of contract law protecting rights and obligations

Module 2:

Law and Ethics: Professional Code of Conduct for Engineers Relationship between Law and Ethics.

Module 3:

Self Awareness: Understanding oneself and others; will be the Productive

Module 4:

Needs & Self: Needs and its importance; Understanding harmony and its relevance in actualization at personal and professional levels

Module 5:

Ethics and Values: Professional ethics and their importance for students; Understanding the importance of values & their application in everyday life.

(A UGC Autonomous Institute, Affiliated to RGPV, Bhopal) Scheme Based on AICTE Flexible Curriculum

Bachelor of Technology (B.Tech.)

Department of Computer Science & Engineering-AIML Semester-III

Course Outcomes:

- 1. Understand the meaning of the concept Law
- 2. Basic Knowledge of the laws relating to Engineers
- 3. Importance of being a law abiding person
- 4. Self Development by using different techniques to live in harmony at various levels
- 5. Ethical character needed for a successful and satisfactory work life

List of Text Books / Reference Books:

- 1. Business Law- By Saroj Kumar.
- 2. Law of Contract- By Avtar Singh
- 3. Business Law- By G K Kapoor
- 4. Business & Commercial Laws By Sen & Mitra
- 5. Business Law for Engineers- by Calvin Frank Allen
- 6. Hilgard, E. R.; Atkinson, R. C. & Atkinson, R.L. (1975). Introduction to Psychology. 6th Edition. New Delhi: Oxford and IBH Publishing Co. Pvt. Ltd.
- 7. Govindarajan, M; Natarajan, G. M. & Senthilkumar, V.S. (2013). Professional Ethics & Human Values. Prentice Hall: New Delhi
- 8. Gogate, S. B. (2011). Human Values & Professional Ethics. Vikas Publishing: New Delhi.
- 9. Govindarajan, M; Natarajan, G. M. & Senthilkumar, V.S. (2013). Professional Ethics & Human Values. Prentice Hall: New Delhi
